POLYESTER NONABSORBABLE SURGICAL SUTURES, U.S.P.

DESCRIPTION
Polyester is a braided, nonabsorbable, sterile, surgical suture composed of Polyethylene terephthalate. It is prepared from fibers of high molecular weight, long-chain, linear polyester having recurrent aromatic rings as an integral component.

The braided Polyester suture is sterile coated and available undyed (white) or dyed (green). Polyester sutures meet all requirements established by the United States Pharmacopeia (USP) for nonabsorbable surgical sutures.

INDICATIONS
Polyester surgical sutures are indicated for use in general soft tissue approximation/ligation procedures.

ACTIONS
Polyester sutures exhibit a minimal inflammatory reaction in tissues, followed by gradual encapsulation of the suture by fibrous connective tissue. Polyester sutures are not absorbed, nor is any significant change in tensile strength retention known to occur in vivo.

CONTRAINDICATIONS
Polyester surgical sutures are contraindicated for use in cardiovascular, ophthalmic and neurological surgeries.

WARNINGS
Users should be familiar with surgical procedures and techniques involving nonabsorbable sutures before employing Polyester suture for wound closure, as a risk of wound dehiscence may vary with the site of application and the suture material used.

Do not use if package is open or damaged or if the expiration date has been exceeded.

Discard open unused suture. Do not resterilize; resterilization may alter the physical properties of the suture, which will result in an adverse patient reaction.

Users should exercise caution when handling surgical needles to avoid inadvertent needle sticks. Discard used needles in a "sharps" container.

Store in a cool dry environment.

As with any foreign body, prolonged contact of this or any other suture with salt solutions, such as those found in the urinary or biliary tracts, may result in calculus formation.

Acceptable surgical practice should be followed with respect to drainage and closure of contaminated or infected wounds.

PRECAUTIONS
In handling this or any other surgical suture material, care should be taken to avoid damage from handling. Avoid crushing or crimping damage due to application of surgical instruments such as forceps or needle holders.

Adequate knot security requires the accepted surgical technique of flat, squared ties with additional throws as warranted by surgical circumstance and experience of the surgeon.

ADVERSE REACTIONS
Adverse effects associated with the use of this device include wound dehiscence, calculus formation in urinary and biliary tracts when prolonged contact with salt solutions such as urine and bile occurs. Infected wounds, minimal acute inflammatory tissue reaction, and transient local irritation. Discuss the potential for allergic reaction in patients that are known to be sensitive to Polyester suture.

HOW SUPPLIED
Polyester sutures are available in various USP sizes. Polyester sutures are supplied in a wide range of lengths affixed to a diverse assortment of needle types.

CAUTION
Federal (USA) law restricts this device to sale by or on the order of a physician or licensed practitioner.
